MIAP imaging decision-support report

Case Study-2026-001 - generated 2026-11-09 23:10 UTC

Decision support only. This report is not a diagnosis and must not replace review by a qualified clinician.

Case pseudonym	Study-2026-001
Consent	clinical
Image	i_e85b49a6-da95-46a9-b454-d55949c2d452 (application/dicom)
Modality	xray
Region / view	chest
Model	chest_densenet121 xrv-0.1
Model digest	c8f0ada55b4c059bf07ead3b4702e5f1
Provenance	p_d14d3f1f-3602-454d-9e3a-dbc36ac18772
Analysis job	j_9d44dc00-8e51-48b0-84c7-18eaaf21dbea

Findings

Finding	Probability
Lung Opacity	90.1%
Effusion	85.2%
Pneumonia	79.9%
Enlarged Cardiomediastinum	75.4%
Consolidation	74.3%
Atelectasis	69.6%
Mass	61.5%
Edema	61.2%

Heatmap: where the model looked, not proof of a finding.

Warnings

- Decision support only. This output is not a diagnosis.

- The heatmap shows where the model looked, not proof of a finding.
- Model: chest_densenet121 xrv-0.1.

Model limitations

- Trained on non-African populations; performance may not transfer.
- Labels are dataset annotations, not confirmed diagnoses.
- Portable or scanned films and unusual windowing may degrade results.
- The heatmap shows where the model looked, not proof of a finding.

Intended use: Decision support for research and teaching: multi-finding probabilities on chest radiographs (PA/AP). Not a diagnosis.

Validation: No validation on Ugandan or local patients. Upstream public-dataset performance only; no local benchmark has been run.

Decision support only. This report is not a diagnosis and must not replace review by a qualified clinician.
