MIAP imaging decision-support report

Case OVERLAY-EDAD6736 - generated 2026-11-10 05:47 UTC

Decision support only. This report is not a diagnosis and must not replace review by a qualified clinician.

Case pseudonym	OVERLAY-EDAD6736
Consent	research
Image	i_e3679a59-73e0-4f53-a017-4d525264411a (image/png)
Modality	xray
Region / view	chest
Model	chest_densenet121 xrv-0.1
Model digest	c8f0ada55b4c059bf07ead3b4702e5f1
Provenance	p_a2b6d264-3538-49a8-942c-2d0a4be99f76
Analysis job	j_23a0c99d-1bfa-4708-b0e2-7c772100f4a0

Findings

Finding	Probability
Lung Opacity	99.0%
Pneumonia	98.4%
Consolidation	93.9%
Edema	92.0%
Infiltration	90.4%
Effusion	80.1%
Nodule	71.9%
Mass	70.2%

Heatmap overlaid on the de-identified image: where the model looked, not proof of a finding. The model input is the centre square, so the overlay covers that region.

Warnings

- Decision support only. This output is not a diagnosis.
- The heatmap shows where the model looked, not proof of a finding.
- Model: chest_densenet121 xrv-0.1.
- No DICOM metadata. Modality and body region must be chosen manually or guessed by the fallback classifier.

Model limitations

- Trained on non-African populations; performance may not transfer.
- Labels are dataset annotations, not confirmed diagnoses.
- Portable or scanned films and unusual windowing may degrade results.
- The heatmap shows where the model looked, not proof of a finding.

Intended use: Decision support for research and teaching: multi-finding probabilities on chest radiographs (PA/AP). Not a diagnosis.

Validation: No validation on Ugandan or local patients. Upstream public-dataset performance only; no local benchmark has been run.

Decision support only. This report is not a diagnosis and must not replace review by a qualified clinician.
