MIAP imaging decision-support report

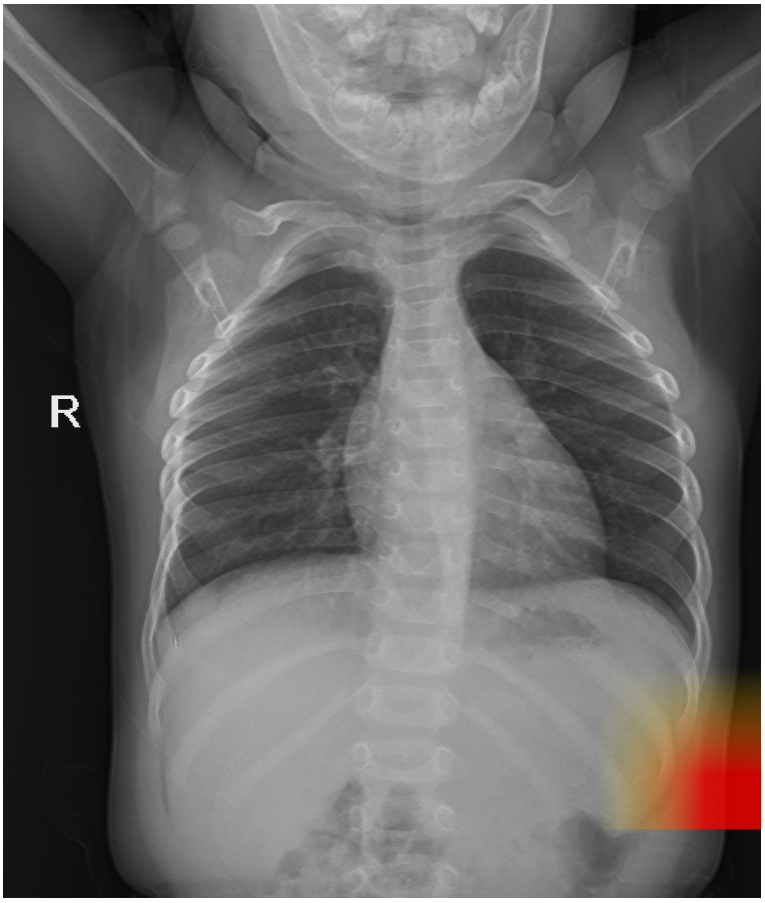

Case 003 - generated 2026-11-10 09:01 UTC

Decision support only. This report is not a diagnosis and must not replace review by a qualified clinician.

Case pseudonym	003
Consent	clinical
Image	i_568402a8-99af-4dd3-95e6-a315e6448c84 (application/dicom)
Modality	xray
Region / view	chest
Model	chest_densenet121 xrv-0.1
Model digest	c8f0ada55b4c059bf07ead3b4702e5f1
Provenance	p_c2862d5e-a8bb-40a4-b948-6238d66d8dda
Analysis job	j_b9a9b813-11ef-47aa-a3d4-b037eda203d1

Findings

Finding	Probability
Infiltration	41.9%
Pneumonia	36.8%
Pneumothorax	21.0%
Consolidation	20.4%
Enlarged Cardiomediastinum	8.2%
Fracture	7.2%
Lung Opacity	7.1%
Nodule	6.1%

Heatmap overlaid on the de-identified image: where the model looked, not proof of a finding. The model input is the centre square, so the overlay covers that region.

Warnings

- Decision support only. This output is not a diagnosis.
- The heatmap shows where the model looked, not proof of a finding.
- Model: chest_densenet121 xrv-0.1.

Model limitations

- Trained on non-African populations; performance may not transfer.
- Labels are dataset annotations, not confirmed diagnoses.
- Portable or scanned films and unusual windowing may degrade results.
- The heatmap shows where the model looked, not proof of a finding.

Intended use: Decision support for research and teaching: multi-finding probabilities on chest radiographs (PA/AP). Not a diagnosis.

Validation: No validation on Ugandan or local patients. Upstream public-dataset performance only; no local benchmark has been run.

Decision support only. This report is not a diagnosis and must not replace review by a qualified clinician.
