MIAP clinical decision-support report

Pseudonym DEMO-004 · generated 2026-11-10 09:13 UTC

Patient	Demo Patient
Hospital number	DEMO-0001
Sex	Female
Age / DOB	41 years · DOB 1985-02-03

Patient identity is included because you own this record. Viewing it was written to the audit chain before this report was rendered.

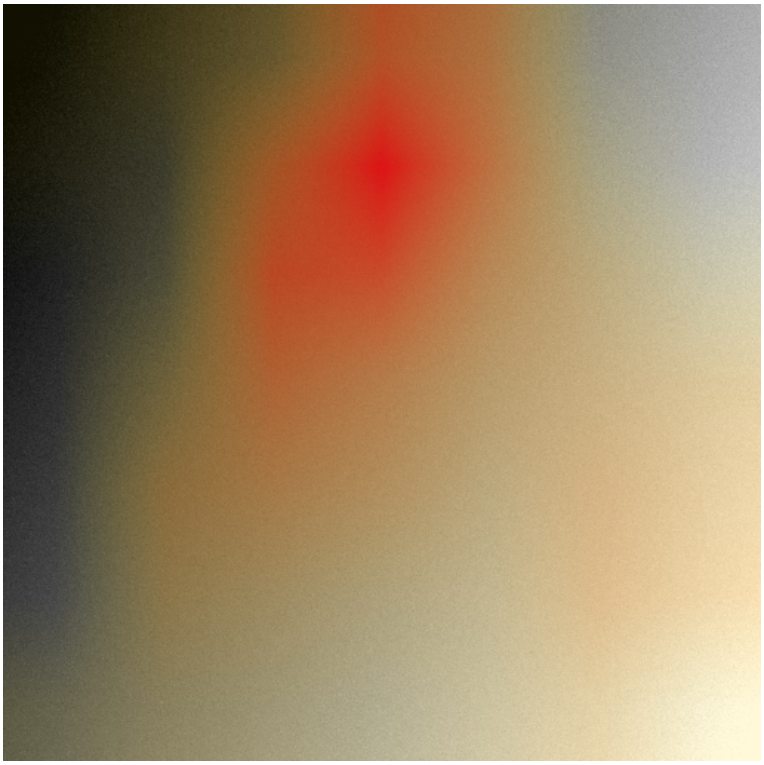

Consent	research
Modality	xray
Region / view	chest
Model	chest_densenet121 xrv-0.1
Provenance	p_5c3d2a2c-dff5-4c2f-ba44-e2cfa0f65721
Analysis	completed · j_6ef9bcfc-56d5-4247-86f2-0195d66436d1

Findings to review

Bands are qualitative and uncalibrated. They are a prompt for review, not a probability of disease.

Finding	Band	Reviewer decision
lung opacity	Worth reviewing	Confirmed by clinician *Demo review note.*
fluid around the lung	Worth reviewing	Not reviewed
an infection-like patch in the lung	Worth reviewing	Not reviewed
a widened central chest shadow	Worth reviewing	Not reviewed
a dense patch in the lung	Worth reviewing	Not reviewed
collapsed lung tissue	Worth reviewing	Not reviewed
a larger solid-looking area	Worth reviewing	Not reviewed
fluid in the lungs	Worth reviewing	Not reviewed

Reviewed 1 of 8 flagged findings · 1 confirmed, 0 dismissed.

Area the model focused on, overlaid on the de-identified image. It shows where the model looked, not proof of disease. The model input is the centre square, so the overlay covers that region.

Caveats

MIAP does not screen for tuberculosis. A low or negative AI result does not exclude TB; use the local TB pathway.

- Decision support only. This output is not a diagnosis.
- The heatmap shows where the model looked, not proof of a finding.
- Model: chest_densenet121 xrv-0.1.

Model limitations

- Trained on non-African populations; performance may not transfer.
- Labels are dataset annotations, not confirmed diagnoses.
- Portable or scanned films and unusual windowing may degrade results.
- The heatmap shows where the model looked, not proof of a finding.

Intended use: Decision support for research and teaching: multi-finding probabilities on chest radiographs (PA/AP). Not a diagnosis.

Validation: No validation on Ugandan or local patients. Upstream public-dataset performance only; no local benchmark has been run.

Decision support only. This report is not a diagnosis and must not replace review by a qualified clinician.

Technical record
